This book works great as a reference (after having learned Real & Complex Analysis), but is a pain in the ass to learn it from. If you are looking for a good first text on Measure theory, I would recommend Eli Stein's book on Measure Theory or Folland's Real Analysis Everything contained in the book is useful, though - there are no throwaway theorems or rehashed proofs of earlier material.

I also really liked Landau's Foundations of Analysis and Shilov's Elementary Real and Complex Analysis (same level as Rudin but Shilov's motivates the concepts very well and goes in-depth to the topology). I do not know if you read the following book: Introduction to Topology and Modern Analysis by George Simmons.

The basic techniques and theorems of analysis are presented in such a way that the intimate connections between its various branches are strongly emphasized. The traditionally separate subjects of 'real analysis' and 'complex analysis' are thus united in one volume. Some of the basic ideas from functional analysis are also included.

In contrast, Real and Complex Analysis covers measure theory, some functional analysis and Fourier analysis, and complex analysis. Based on your description of what you want, I'd say you should start with Principles of Mathematical Analysis. As for the style of the books, Rudin is famous for his "slick" proofs and difficult exercises.
