1.4. RANDOM SIGNALS IN PRACTICE • We model x as a random variable with a probability density function dependent upon which hypothesis is present $-1 \leq v \leq +1$ $x f(x) = \int_{-1}^{+1} x^n f(x) dx$ Area $= 1$ $v \leq T$ Conditional density function on x • We decide that the hypothesis signal is present if $x > v$ T , where v

RANDOM SIGNALS Signals can be divided into two main categories - deterministic and random. The term random signal is used primarily to denote signals, which have a random in its nature source. As an example we can mention the thermal noise, which is created by the random movement of electrons in an electric conductor. Apart from this,
