Explore bending of light between two media with different indices of refraction. See how changing from air to water to glass changes the bending angle. Play with prisms of different shapes and make rainbows.

Bending Light - Snell's Law | Light | Refraction - PhET ...

Refraction PhET Lab . Objectives: Use ray diagrams to model the refraction of light from air into glass. Deduce whether the index of refraction for a material is a constant. Verify Snell's Law and use it to identify an unknown material.

Light Reflection and Refraction Lab Using PhET Simulation I) Introduction: When a light ray strikes a smooth interface separating two transparent materials (like air, glass, or water), the wave is partly reflected and partly refracted (or transmitted) into the second material. For an example of this, imagine you are outside looking at a restaurant window. ...

Refraction is the bending of light at the interface of two materials with different refractive indices is called refraction. Possible example: A straw in a glass of iced tea looks like it is bent because of the difference in densities and refractive indices of air and the liquid.

refraction? Include equations for angles. Reflection is where light bends off a boundary. The angles of incidence and reflection are equal. Refraction is where light bends travelling across a boundary, from one medium to another. The ratio of the sines of the angles is the index of refraction, n .

of refraction of the two mediums are given. 6. Use the Law of Reflection and the Law of Refraction to fill out the following table (copied into your lab notebook), in which the angle of incidence is set and you are calculating the angle of reflection (rfl) and the angle of refraction (rfr). 7. Test out your predictions using the simulation.
