I plan on working through Rudin's Principles of Mathematical Analysis until chapter 8 since I hear 1-8 are fantastic (which I agree with right now), but 9-11 are abysmal. Does anyone know of any good book from which I could replace these chapters? I believe they cover multivariate/vector analysis, differential forms, and Lebesgue integration.

I looked it up online, to see if I was missing something obvious, but the only place anyone worked it out was in the the U of Wisconsin solution set, and the solution goes on for 15 pages. So I think I'll pass on that one. I'm also starting to work on Rudin's Real and Complex Analysis at /r/bigrudin, so I doubt that I will go on to Chapter 11.
