Title Virtual Ripple Tank: Description Students will investigate wave properties (speed in a medium, reflection, diffraction, interference) using the PhET virtual ripple tank.

Virtual Ripple Tank - PhET Contribution

Study wave motion, diffraction, interference, and refraction in a simulated ripple tank. A wide variety of scenarios can be chosen, including barriers with one or two gaps, multiple wave sources, reflecting barriers, or submerged rocks. The wavelength and strength of waves can be adjusted, as well as the amount of damping in the tank.

use of a ripple tank. A ripple tank consists of a large rectangular tray with a transparent bottom. Water is placed in this tank to a depth of approximately one centimeter. A light source is then placed above the tray of water. When the water is disturbed it can be seen on a white surface positioned ...

Physics of Water Waves :: Lab Report

The ripple tank shows the crests and trough of the water wave – a transverse wave. From this, you can deduce the wavelength, frequency and period of the water wave. Since longitudinal waves can be modelled with a transverse wave, you can deduce the motion of a longitudinal wave as well.

The remaining pages suggest experiments for the ripple tank. Copies of this manufacturer's manual will be in the lab so you need not print it out.

Ripple Tank Labs: Guidelines & Reporting Form

Basic experiments with ripple tanks. Introducing the ripple tank, a powerful tool that can help students visualize wave behaviour in general. By pointing out that wavefronts are perpendicular to the direction of motion of the wave, you can link ripple tank experiments to experiments in optics, where rays show the direction of motion of the light.
