Radical equations may have one or more radical terms and are solved by eliminating each radical, one at a time. We have to be careful when solving radical equations as it is not unusual to find extraneous solutions, roots that are not, in fact, solutions to the equation. These solutions are not due to a mistake in the solving method, but result from the process of raising both sides of an ...

Just as the square and the square root are inverses and “undo” each other, the power of exponents help us to simplify radicals.. As we saw in our previous lesson on Square Roots, the radical notation is comprised of the radical symbol, the radicand or the expression under the radical sign and the

index which determines the type of radical we are dealing with.
