Fault analysis using PSCAD/EMTDC for 150 kV South Sulawesi transmission system Abstract: Short circuit fault as one of the characteristics of transient disturbances in electric power systems that must be addressed by the safety equipment. The increase at occurrence of short circuit generates large electrical currents and at a very low voltage.

PSCAD Cookbook – Protection Studies Page 8 Case 2 – Reclosing the Line while the Fault is still Present (Auto Reclose) In the first fault event, saturation had taken approximately two cycles. If the line is reclosed while the fault is present, now the CT may saturate much faster due to the presence of the remnant flux.
