Problem management is the process responsible for managing the lifecycle of all problems that happen or could happen in an IT service. The primary objectives of problem management are to prevent problems and resulting incidents from happening, to eliminate recurring incidents, and to minimize the impact of incidents that cannot be prevented.

Hi I have posted this problem before as Dynamic Bar Chart Category Axis Problem, but the search engine wouldn't pick it up and I'm assuming that's why I got no response. So here goes again.... I have created a dynamic bar chart (roughly based on Stephen Bullen's funcnrt4). The number of categories can range from 2 to about 50 and ideally I would like the category axis names font to be Arial 10 ...

The "index number problem" is the construction of a valid index when both price and quantity change over time. [citation needed] For instance, in the construction of price indices for inflation, the nature of goods in the economy changes over time as well as their prices. A price index constructed in 1950 using a standard basket of goods based on 1950 consumption would not well represent the ...
