Therefore, the equation of the regression line is $\hat{y} = 2.71x + 88.07$. Even though we found an equation, recall that the correlation between x and y in this example was weak. Thus, this regression line may not work very well for the data. For example, for a student with $x = 0$ absences, plugging in, we find that the grade predicted by the regression ...

Regression analysis is used in stats to find trends in data. For example, you might guess that there's a connection between how much you eat and how much you weigh; regression analysis can help you quantify that. Regression analysis will provide you with an equation for a graph so that you can make predictions about your data.
