An isosceles triangle is a triangle with (at least) two equal sides. In the figure above, the two equal sides have length b and the remaining side has length a . This property is equivalent to two angles of the triangle being equal. An isosceles triangle therefore has both two equal sides and two equal angles. The name derives from the Greek *iso* (same) and *skelos* (leg).

The smallest and best-known Pythagorean triple is .The right triangle having these side lengths is sometimes called the 3, 4, 5 triangle.. Plots of points in the $-plane$ such that is a Pythagorean triple are shown above for successively larger bounds. These plots include negative values of x and y , and are therefore symmetric about both the x - and y -axes.
