Intro to Stochastic Systems (Spring 16) Lecture 3 3 Random signals and probabilistic systems We have defined stochastic signals¹ in an earlier lecture. A stochastic signal X is a collection $(X(t))_{t \in T}$ of random variables indexed by a time variable $t \in T$. Depending on the structure of the set T , we speak of discrete- or continuous-time signals:

3 Random signals and probabilistic systems - Maxim Raginsky

LTI systems on signals modeled as the outcome of probabilistic experiments, i.e., a class of signals referred to as random signals (alternatively referred to as random processes or stochastic processes). Such signals play a central role in signal and system design and analysis, and throughout the remainder of this text. In this

Signals, Systems and Inference, Chapter 9: Random Processes

Probability, Statistics, and Random Signals offers a comprehensive treatment of probability, giving equal treatment to discrete and continuous probability. The topic of statistics is presented as the application of probability to data analysis, not as a cookbook of statistical recipes.
