## Reacting Ionic Species In Aqueous

Several types of reactions occur in water. When water is the solvent for a reaction, the reaction is said to occur in aqueous solution, which is denoted by the abbreviation (aq) following the name of a chemical species in a reaction. Three important types of reactions in water are precipitation, acid-base, and oxidation-reduction reactions.

Key Points. Ionic equations show species reacting as their ionic components. Subscripts are not needed to describe the state of the matter, because all ions are in aqueous solution. A net ionic equation is one in which spectator ions are removed. Spectator ions are present in solution but do not participate in the actual precipitation reaction.
