### **Rational Expressions & Practice - Practice Test Questions & Chapter Exam | Study.com**

A rational expression is an expression of the form  $\frac{p}{q}$ , where  $p$  and  $q$  are similar expressions. On the COMPASS Test and in this lesson, both  $p$  and  $q$  will be polynomials. Simplifying Rational Expressions. This lesson is essentially an application of factoring polynomials. When the polynomials in the numerator and denominator of an expression share factors, you can cancel these factors out.

### **Rational Expressions | COMPASS Test Study Guide**

Factor the numerator and the denominator of a rational expression using advanced methods, and cancel out common terms.

### **Simplify rational expressions (advanced) (practice) | Khan Academy**

Don't even think about trying this on Test Day. Like fractions, rational expressions can be proper or improper. A proper rational expression has a lower-degree numerator than denominator (e. g.,  $\frac{1}{x^2 + 3}$ ), and an improper one has a higher-degree numerator than denominator (e. g.,  $\frac{x^2 + 3}{x - 1}$ ). The latter can be simplified using ...

**Lessons & Practice**

The difference between rational and fractions is rational expressions have variable terms (polynomials) in their numerators and denominators and fractions just have numbers. So, simplifying rational expressions is very much like simplifying "fraction" expressions which you know as reducing/simplifying a fraction.
